

## Skitter Slideshow Quick Docs

### 1.0 Installation

- 1.1 To install Skitter Slideshow load the extension manager, select File->install and select the downloaded MXP file. Then restart Dreamweaver

### 2.0 Quick use notes

- 2.1 Please visit <http://kaosweaver.com/extensionshelp/kaoshelp/Skitter%20Slideshow>
- 2.2 If you do not select "Get and Setup jQuery" – 4<sup>th</sup> checkbox in the extension – you will have to either already have jQuery setup on the page – or – will need to download and setup jQuery manually on the page. If you're not sure, select the checkbox.

### 3.0 Files

- 3.1 Included in the ZIP file are the files you will need to assist with making the extension work. It attempts to do these things automatically for you, however, if the extension fails to copy these files, you will need to manually copy them to your kaosjs folder on your site.
- 3.2 If you manually copy the CSS file over, you will need to update the width and height to the .box\_skitter class, the last line in the skitter.styles.css file, to match your slideshow image's width and height.

### 4.0 Support

- 4.1 Visit Kaosweaver.com for support or call 913.608.5399 during normal business hours (central time, USA)
